

IPCallCo

Highly-Visible, Two-Sided Solar Powered LED Signs

IPCallCo's advanced technology solar-powered LED signs are an easy and affordable solution for remote locations without AC options or when marine, road, airport and building codes present major hurdles. Ideal for waterway channel markers and marina docks. Other designs are available for rural road and airport runways, restaurants, storefronts, hiking trails, camp grounds, parks, taxi stands, tunnels and entry gates, just to name a few!

Go Green  with Solar!

The state and federal governments encourage the use of safe, non-polluting renewable energy by offering incentives that lower the cost of installing solar power in homes and businesses. These incentives come in the form of rebates, tax credits, below-market rate loans, deductions and exemptions. Visit www.dsireusa.org and www.irs.gov for information.
