

IPCallCo

Highly-Visible, Two-Sided Solar Powered LED Signs

IPCallCo's advanced technology solar-powered LED signs are an easy and affordable solution for remote locations without AC options or when airport, road, marine or building codes present major hurdles. Ideal for rural or difficult terrain, like isolated airports, country roadways and temporary military sites. Other designs are available for restaurants, storefronts, waterway channel markers, marina docks, hiking trails, camp grounds, parks, taxi stands, tunnels and entry gates, just to name a few!

***3-Year Warranty**

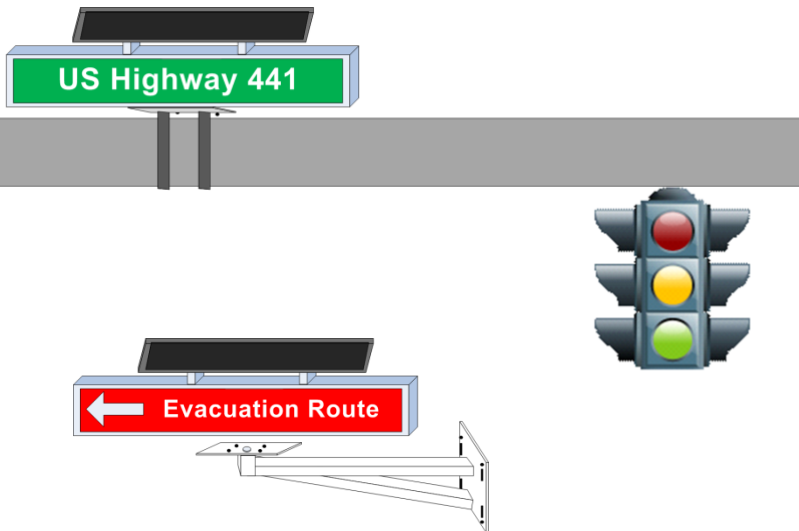

The state and federal governments encourage the use of safe, non-polluting renewable energy by offering incentives that lower the cost of installing solar power in homes and businesses. These incentives come in the form of rebates, tax credits, below-market rate loans, deductions and exemptions. Visit www.dsireusa.org and www.irs.gov for information.

***3 Year Limited Warranty, please request full warranty for details.**
